

HAS YOUR HEART STOPPED? BUT YOU HAVEN'T NOTICED IT, YET...

HEART OF THE INFLATABLE LIFEJACKET

Despite its small size, the Hammar Inflator is of huge importance for your lifejacket's performance. The inflator's mission is to puncture the gas cylinder and give the lifejacket full buoyancy when needed.

PERIODICAL CHECKING

Even though the Hammar Inflator has the longest operational life on the market, you eventually need to replace the unit.

- Check that the single point indicator is green
- Check that the expiry date is within its limit

If the above requirements are not met you need to replace your inflator system. Contact your local service station or dealer to purchase the spare parts or to get help with rearming of your lifejacket.

REMEMBER THE ANNUAL SERVICE

All inflatable lifejackets need an annual service. Check the instructions from your lifejacket manufacturer.

If you need to replace the Hammar Inflator, scan the QR code or visit cmhammar.co/inflator for instructions, films and support.

Please note that all rearming kits include a complete rearming instruction.
